CE Marked Material
Human Coxsackie B4 for Nucleic Acid Amplification Techniques
NIBSC code: 08/174-XXX
Instructions for use
(Version 7.0, Dated 21/07/2011)

This material is a self certified IVD and complies with the requirements of the "EU in vitro diagnostic medical device directive 98/79/EC".

1. INTENDED USE
This product is CE marked for use as an IVD in Europe. In all other territories it is the sole responsibility of the Recipient to ascertain whether it can be used as an IVD.

The reagent is supplied to professional users, typically hospital laboratories, public health organisations and appropriate research organisations. The NIBSC Coxsackie B4 working control is intended to be used as a run control for routine nucleic acid amplification techniques (NAT) assays.

The control should be extracted and amplified alongside unknown samples as part of a continuing quality control programme used to monitor assay performance. The use of re-frozen or diluted product or by non-professional users may lead to inconsistent/erroneous results.

2. CAUTION
This preparation is not for administration to humans or animals in the human food chain.

The preparation contains infectious human Coxsackie B4 which has NOT been inactivated and foetal calf serum.

As with all materials of biological origin, this preparation should be regarded as potentially hazardous to health. It should be used and discarded according to your own laboratory’s safety procedures. Such safety procedures should include the wearing of protective gloves and avoiding the generation of aerosols. Care should be exercised in opening ampoules or vials, to avoid cuts.

3. UNITAGE
There is no unitage assigned to this control. The control should therefore be validated for use as a run control and the expected results determined by the end user for their particular NAT assay. NIBSC have determined that the Ct value of the control is approximately 30 using our in-house assay. However different extraction and amplification instruments and different assays may yield different results. Therefore it is important that each user validates this control using their own instruments and assays. Due to the slight variation between batches users are advised to re-validate their assays when using a new batch of control.

This material MUST NOT be used for any calibration purposes at all.

4. CONTENTS
Country of origin of biological material: United Kingdom.
Each vial is encoded 08/174-XXX and contains 1.0ml of control. The control consists of a whole virus preparation of Coxsackie B4 virus diluted in a buffer comprising 10mM Tris-HCl pH7.4 and 2% foetal calf serum.

5. STORAGE
The control should be delivered in a frozen state and then stored at or below -70°C until use. Should the material arrive in a thawed state it should be discarded and NIBSC contacted for a replacement. Material should be thawed once and not refrozen. Once thawed each vial should be stored between +2°C and +8°C and then be used within five days. After this point the material should be discarded. Users are encouraged to inform NIBSC of the performance of the preparation from reviews of their data monitoring. Any user who has data supporting any deterioration in the characteristics of any reference preparation is encouraged to contact NIBSC.

6. DIRECTIONS FOR OPENING
Vials have a screw cap; an internal stopper may also be present. The cap should be removed by turning anti-clockwise. Care should be taken to prevent loss of the contents. Please note: If a stopper is present on removal of the cap, the stopper should remain in the vial or be removed with the cap.

7. USE OF MATERIAL
The control should be used directly without further dilution and extracted and amplified alongside unknown samples under test. Best results are achieved when the entire volume of the control is extracted. It is recommended that the control be included in each assay run to monitor assay performance.

8. STABILITY
Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. All reference materials should be stored immediately on receipt as indicated on the label. The expiry date of this control is indicated on the label when stored at or below -70°C. To ensure stability, this control will be regularly monitored at NIBSC during its shelf life.

9. REFERENCES

10. ACKNOWLEDGEMENTS
This control has been produced as part of an ongoing collaboration between NIBSC/HPA, Professor W Carman and the UK Clinical Virology Network.

11. FURTHER INFORMATION
To use the free, on-line, real-time data reporting and analysis tool RRS with this control please contact ClinicalVirology@nibsc-hpa.org.uk.

12. CUSTOMER FEEDBACK
Customers are encouraged to provide feedback on the suitability or use of the material provided or other aspects of our service. Please send any comments to enquiries@nibsc.org

13. CITATION
In all publications, including data sheets, in which this material is referenced, it is important that the preparation's title, its status, the NIBSC code number, and the name and address of NIBSC are cited and cited correctly.

14. MATERIAL SAFETY SHEET
Classification in accordance with Directive 2000/54/EC, Regulation (EC) No 1272/2008: Not applicable or not classified

**Physical and Chemical properties**

<table>
<thead>
<tr>
<th>Physical appearance: Liquid</th>
<th>Corrosive: No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stable: Yes</td>
<td>Oxidising: No</td>
</tr>
<tr>
<td>Hygroscopic: No</td>
<td>Irritant: No</td>
</tr>
<tr>
<td>Flammable: No</td>
<td>Handling: See caution, Section 2</td>
</tr>
<tr>
<td>Other (specify):</td>
<td>Contains infectious Coxsackie B4 and materials of animal origin.</td>
</tr>
</tbody>
</table>

**Toxicological properties**

- **Effects of inhalation:** Avoid – contains infectious Coxsackie B4
- **Effects of ingestion:** Avoid – contains infectious Coxsackie B4
- **Effects of skin absorption:** Not established, avoid contact with skin

**Suggested First Aid**

- Inhalation: Seek medical advice
- Ingestion: Seek medical advice
- Contact with eyes: Wash with copious amounts of water. Seek medical advice
- Contact with skin: Wash thoroughly with water.

**Action on Spillage and Method of Disposal**

Spillage of ampoule contents should be taken up with absorbent material wetted with an appropriate disinfectant. Rinse area with an appropriate disinfectant followed by water. Absorbent materials used to treat spillage should be treated as biological waste.

15. **LIABILITY AND LOSS**

In the event that this document is translated into another language, the English language version shall prevail in the event of any inconsistencies between the documents.

Unless expressly stated otherwise by NIBSC, NIBSC’s Standard Terms and Conditions for the Supply of Materials (available at http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx or upon request by the Recipient) (“Conditions”) apply to the exclusion of all other terms and are hereby incorporated into this document by reference. The Recipient’s attention is drawn in particular to the provisions of clause 11 of the Conditions.

16. **INFORMATION FOR CUSTOMS USE ONLY**

<table>
