WHO International Standard Corticotrophin (ACTH), Porcine, For Bioassay
NIBSC code: 59/016
Instructions for use
(Version 4.0, Dated 23/03/2013)

1. INTENDED USE
This consists of a batch of ampoules (coded 59/016) which was established as the Third International Standard for Corticotrophin by the WHO Expert Committee on Biological Standardization in 1962 (WHO ECBS TRS 1963). It was renamed the Third International Standard for Corticotrophin, Porcine, for Bioassay in 1968 (WHO ECBS, TRS 1969).

2. CAUTION
This preparation is not for administration to humans or animals in the human food chain.

3. UNITAGE
Each ampoule contains 5 International Units (by definition)

4. CONTENTS
Country of origin of biological material: United Kingdom.
Each ampoule contains the residue, after freeze-drying, of 1.0ml of a solution which contained:

- Porcine ACTH approx 50 μg
- Lactose " 5 mg
- Acetic acid " 3 mg
- Nitrogen gas at slightly less than atmospheric pressure.

5. STORAGE
Unopened ampoules should be stored at -20°C

6. DIRECTIONS FOR OPENING
Tap the ampoule gently to collect the material at the bottom (labelled) end. Ensure ampoule is scored all round in a similar way and from the same material as the International Standard to serve as an International Working Standard for use as national and laboratory standards.

7. USE OF MATERIAL
For practical purposes each ampoule contains the same amount of the same materials. Dissolve all the contents in a known amount of buffer solution. No attempt should be made to weigh portions of the freeze-dried powder.

8. STABILITY
It is the policy of WHO not to assign an expiry date to their international reference materials. They remain valid with the assigned potency and status until withdrawn or amended. Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label.

9. REFERENCES

10. ACKNOWLEDGEMENTS
Grateful acknowledgements are due to the Armour Company of Great Britain and the United States Pharmacopeia for providing the material for the Standard and to the participants in the international collaborative study.

PREPARATION OF AMPOULES

Side view of ampoule opening device containing an ampoule positioned ready to open. ‘A’ is the score mark and ‘B’ the point of applied pressure.
The bulk material. This consisted of 4.5g of a batch of corticotrophin made by the Armour Laboratories, Chicago, and generously donated by the Armour Company of Great Britain, and a further 4.5g of material from the same manufacturing batch that were supplied through the courtesy of the United States Pharmacopeia. The material was made from pig pituitaries and purified by glacial acetic acid extraction, ethyl ether precipitation, oxycellulose adsorption and elution, removal of electrolytes by ion exchange, and freeze-drying. Its stated potency was 99.9 IU/mg by subcutaneous Sayers’ assay and 31.8 - 34.5 IU/mg by intravenous Sayers’ assay.

ACTIVITY OF AMPOULE CONTENTS
This was compared with the activity of the Second International Standard in an international collaborative study (Bangham et al, 1962). The pressor activity, estimated by rat blood pressure assay in terms of the Third International Standard for Oxytocin and Vasopressin, Ovine, for Bioassay, was found to be <25miu/ampoule. Accelerated thermal degradation studies have shown the Standard to be very stable under normal storage conditions (Storrington et al, 1980).

12. CUSTOMER FEEDBACK
Customers are encouraged to provide feedback on the suitability or use of the material provided or other aspects of our service. Please send any comments to enquiries@nibsc.org

13. CITATION
In all publications, including data sheets, in which this material is referenced, it is important that the preparation’s title, its status, the NIBSC code number, and the name and address of NIBSC are cited and cited correctly.

14. MATERIAL SAFETY SHEET
Classification in accordance with Directive 2000/54/EC, Regulation (EC) No 1272/2008: Not applicable or not classified

| Physical and Chemical properties | Corrosive: No |
| Stable: Yes | Oxidising: No |
| Hygroscopic: Yes | Irritant: No |
| Flammable: No | Handling: See caution, Section 2 |

| Other (specify): none |

| Toxicological properties |
| Effects of inhalation: Not established, avoid inhalation |
| Effects of ingestion: Not established, avoid ingestion |
| Effects of skin absorption: Not established, avoid contact with skin |

Suggested First Aid

Inhalation: Seek medical advice

Ingestion: Seek medical advice

Contact with eyes: Wash with copious amounts of water. Seek medical advice

Contact with skin: Wash thoroughly with water.

Action on Spillage and Method of Disposal

Spillage of ampoule contents should be taken up with absorbent material wetted with an appropriate disinfectant. Rinse area with an appropriate disinfectant followed by water.

Absentor materials used to treat spillage should be treated as biological waste.

15. LIABILITY AND LOSS
In the event that this document is translated into another language, the English language version shall prevail in the event of any inconsistencies between the documents.

Unless expressly stated otherwise by NIBSC, NIBSC’s Standard Terms and Conditions for the Supply of Materials (available at http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx or upon request by the Recipient) (“Conditions”) apply to the exclusion of all other terms and are hereby incorporated into this document by reference. The Recipient’s attention is drawn in particular to the provisions of clause 11 of the Conditions.

16. INFORMATION FOR CUSTOMS USE ONLY

Country of origin for customs purposes*: United Kingdom  
* Defined as the country where the goods have been produced and/or sufficiently processed to be classed as originating from the country of supply, for example a change of state such as freeze-drying.

Net weight: 8mg  
Toxicity Statement: Non-toxic  
Veterinary certificate or other statement if applicable.  
Attached: No

17. CERTIFICATE OF ANALYSIS
NIBSC does not provide a Certificate of Analysis for WHO Biological Reference Materials because they are internationally recognised primary reference materials fully described in the instructions for use. The reference materials are established according to the WHO Recommendations for the preparation, characterization and establishment of international and other biological reference standards http://www.who.int/bloodproducts/publications/TRS932Annex2_Inter_biol_standardsrev2004.pdf (revised 2004). They are officially endorsed by the WHO Expert Committee on Biological Standardization (ECBS) based on the report of the international collaborative study which established their suitability for the intended use.
