WHO International Standard
ENDOTOXIN (2nd International Standard)
NIBSC code: 94/580
Instructions for use
(Version 4.0, Dated 18/07/2013)

1. INTENDED USE
Calibrant for bacterial endotoxins test

2. CAUTION
This preparation is not for administration to humans or animals in the human food chain.

The material is not of human or bovine origin. As with all materials of biological origin, this preparation should be regarded as potentially hazardous to health. It should be used and discarded according to your own laboratory’s safety procedures. Such safety procedures should include the wearing of protective gloves and avoiding the generation of aerosols. Care should be exercised in opening ampoules or vials, to avoid cuts.

3. UNITAGE
10 000 IU/vial = 10 000 EU/vial

4. CONTENTS
Country of origin of biological material: USA.
Each vial contains the residue after freeze-drying of 1.0 ml of a solution that contained:
- E. coli 0113: H10: K - endotoxin 1 µg
- Lactose 10 mg
- Polyethylene glycol 1 mg

5. STORAGE
Store unopened vials at -20°C or below in the dark. Please note: because of the inherent stability of lyophilized material, NIBSC may ship these materials at ambient temperature.

6. DIRECTIONS FOR OPENING
Vials have a ‘flip-up’ circular cap. Either on the cap or the collar of the vial, there is an indication of the point at which to lever off the cap. This exposes an area of the stopper through which reconstitution and withdrawal of the preparation can be made using a hypodermic needle and syringe. If use of a pipette is preferred, then fully remove the metal collar using, for example, forceps, taking care to avoid cuts by wearing appropriate gloves. Remove the stopper for access. Care should be taken to prevent loss of the contents.

7. USE OF MATERIAL
No attempt should be made to weigh out any portion of the freeze-dried material prior to reconstitution.
Add 5 ml of sterile, pyrogen-free water (LAL Reagent Water) to the vial. Reconstitute by mixing intermittently for a total time of not less than 30 min, using a vortex mixer. The resulting solution of 2000 IU (= EU) per ml is to be used as a stock solution for preparing serial dilutions. The stock solution may be divided into aliquots immediately after reconstitution and the aliquots stored frozen at -40°C or below. Alternatively, the stock solution may be stored at +2-8°C for not more than 14 days. Aliquots of the stock solution are to be taken (for preparing serial dilutions) after vigorous mixing for at least 5 minutes. Subsequent dilutions are to be mixed for not less than 30 seconds.

Suitable precautions should be taken in the use and disposal of the vial and its contents.

8. STABILITY
NIBSC follows the policy of WHO with respect to its reference materials. It is the policy of WHO not to assign an expiry date to their international reference materials. They remain valid with the assigned potency and status until withdrawn or amended. Reference materials are held at NIBSC within assured, temperature-controlled storage facilities. Reference Materials should be stored on receipt as indicated on the label. In addition, once reconstituted, diluted or aliquoted, users should determine the stability of the material according to their own method of preparation, storage and use. Users who have data supporting any deterioration in the characteristics of any reference preparation are encouraged to contact NIBSC.

9. REFERENCES

10. ACKNOWLEDGEMENTS
The endotoxin contained in this ampoule was generously contributed by the FDA/USP to WHO

11. FURTHER INFORMATION

12. CUSTOMER FEEDBACK
Customers are encouraged to provide feedback on the suitability or use of the material provided or other aspects of our service. Please send any comments to enquiries@nibsc.org

13. CITATION
In all publications, including data sheets, in which this material is referenced, it is important that the preparation’s title, its status, the NIBSC code number, and the name and address of NIBSC are cited and cited correctly.

14. MATERIAL SAFETY SHEET
Classification in accordance with Directive 2000/54/EC, Regulation (EC) No 1272/2008: Not applicable or not classified

### Action on Spillage and Method of Disposal

Spillage of ampoule contents should be taken up with wetted absorbent material. Rinse area with an appropriate cleaning agent followed by water. Absorbent materials used to treat spillage should be treated as biological waste.

15. **LIABILITY AND LOSS**

In the event that this document is translated into another language, the English language version shall prevail in the event of any inconsistencies between the documents.

Unless expressly stated otherwise by NIBSC, NIBSC’s Standard Terms and Conditions for the Supply of Materials (available at [http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx](http://www.nibsc.org/About_Us/Terms_and_Conditions.aspx) or upon request by the Recipient) (“Conditions”) apply to the exclusion of all other terms and are hereby incorporated into this document by reference. The Recipient’s attention is drawn in particular to the provisions of clause 11 of the Conditions.

17. **CERTIFICATE OF ANALYSIS**

NIBSC does not provide a Certificate of Analysis for WHO Biological Reference Materials because they are internationally recognised primary reference materials fully described in the instructions for use.

The reference materials are established according to the WHO Recommendations for the preparation, characterization and establishment of international and other biological reference standards [http://www.who.int/bloodproducts/publications/TRS932Annex2_Inter_biol_standardsrev2004.pdf](http://www.who.int/bloodproducts/publications/TRS932Annex2_Inter_biol_standardsrev2004.pdf) (revised 2004). They are officially endorsed by the WHO Expert Committee on Biological Standardization (ECBS) based on the report of the international collaborative study which established their suitability for the intended use.
